(57) **ABSTRACT**

Methods and systems for providing an access of a network to a user are disclosed. A method includes receiving a selection of at least one Service Set Identifier (SSID) associated with the network from the user. The user may select the at least one SSID from a plurality of SSIDs on a computing device. The method further includes presenting an embedded multimedia along with a connect option on the computing device based on the selection of the at least one SSID. The method also includes connecting the computing device to the network based on a selection of the connect option. The method furthermore includes opening at least one webpage associated with at least one uniform resource locator (URL) related to the multimedia on the computing device.
